DETAILED ACTION

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 5 provides for the use of iPrP binding antibody, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 5 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2 recites wherein said subject is human, "preferably animate". The claim is therefore unclear as to if the human subject is moving about, or merely alive.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 and 6 rejected under 35 U.S.C. 102(b) as being anticipated by Fishleigh et al. (US Patent 5,773,572, IDS filed 7/31/06; "Fishleigh"). Fishleigh discloses the same

Art Unit: 1649

sequence that is recited in instant claim 1 (see claims 1-10 of Fishleigh and the sequence listing). The method of Fishleigh uses proteinase K to digest non-infectious prior protein (column 16, lines 43-47), otherwise known as PrP^C. Also, Fishleigh discloses human mammalian subjects, CJD, and kuru (column 1, lines 15-26). The antibody of Fishleigh is labeled (column 17, lines 12-48).

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 1-4 and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fishleigh in view of Prusiner et al. (US 6,537,548, IDS filed 7/31/06; "Prusiner"). The teachings of Fishleigh are set forth above. Fishleigh teaches a simple kit (see claim 12), but not does not explicitly disclose a kit with labeled antibodies. Prusiner does disclose detectably labeled anti-PrP antibodies conjugated to radioisotopes, enzymes, and the like (column 8, lines 7-28), which increase the sensitivity of the assay. It would have been obvious to one of ordinary skill

Art Unit: 1649

in the art to take the components of Prusiner and combine them in kit form for ease of use and commercial sale.

8. No claim is allowed.
